Summary

Data Science graduate with hands-on experience building end-to-end machine learning and LLM-based systems. has strong fundamentals in Python, SQL, and model development with practical exposure to RAG pipelines, and analytics dashboards. Focused on solving real-world problems through structured experimentation, data-driven insights, and AI solutions.

Experience

Infynix Communication Ltd

L1 Network Engineer

Nov 2024 – Jul 2025

Bangalore

- Monitored network performance using **MRTG** and **Cacti** to maintain uptime and stability.
- Diagnosed and resolved connectivity issues through log and traffic analysis.

Tensile Tech — Stack Zero

Data Analyst Intern

Jan 2024 – Jun 2024

Remote

- Cleaned and transformed raw datasets using **Python** to support analytical reporting.
- Built interactive dashboards in **Tableau** to communicate insights to stakeholders.

Education

Maharani Cluster University

B.Sc. in Data Science (CGPA 9.3)

2021 – 2024

Bangalore

Certifications

IIT Roorkee – iHub DivyaSampark

Advanced Professional Certificate in Data Science & AI (Ongoing)

Aug 2025 – Present

Remote

Technical Skills

- | | | |
|--------------------|------------|-------------|
| • Python | • LLM | • RAG |
| • SQL | • Pandas | • streamlit |
| • Machine Learning | • Power BI | |

Technical Projects

Personalized Data Science Interview Bot | *Python, Streamlit, LLM, RAG, ChromaDB*

- Built an AI-powered interview simulation platform generating scenario-based questions across Machine Learning, SQL, Python, and Statistics.
- Implemented a Hybrid RAG pipeline using ChromaDB and semantic embeddings to produce context-aware, non-repetitive questions.
- Developed adaptive difficulty logic with automated answer scoring (0–10 scale), structured feedback generation, and real-time session tracking.

ISP Customer Churn Analysis Dashboard | *MSSQL, Python, Power BI*

- Designed a churn analytics pipeline using SQL and Python to compute churn rate, tenure-based risk segmentation, and area-wise performance metrics.
- Built interactive Power BI dashboards with advanced DAX measures (Churn %, High-Latency Risk Zones, Packet Loss Impact) using dynamic filter context.
- Identified high-risk early-tenure customers and network regions contributing disproportionately to churn, enabling data-driven retention strategy recommendations.

CRM Support Ticket Classification System | *Python, NLP, Scikit-learn, TF-IDF, Streamlit*

- Developed an end-to-end NLP-based text classification system on 24,000 customer support tickets using TF-IDF and Logistic Regression, achieving 89% accuracy with strong precision, recall, and F1 performance.
- Deployed an interactive Streamlit application with customer and support dashboards for real-time ticket categorization, confidence scoring, and ticket distribution visualization.
